May 26th – Field Day & LAST DAY OF SCHOOL

1st Release - 10:54 am & 2nd Release - 11:04 am

Count your Bank Bucks!

The last day to do banking at Osmond Elementary will be **Tuesday, May 16th**. Each student who has participated in this year's banking program will need to have made 40 deposits and have turned in their 40 bank bucks to the bank by Friday, May 19th. Please remember, you may need to visit the bank in person to get all 40 deposits.

Library Notes . . .

May 15th * Last day to get your honors

May 17th * Honors recognition

May 18th * **ALL LIBRARY BOOKS ARE DUE**

May 22nd – 24th * AR movie celebration week

Be watching for a summer reading calendar & information in your new teacher letter at the end of the school year.

IMPORTANT INFORMATION COMING TO PARENTS/STUDENTS VIA MAIL

We will mail a letter at the conclusion of the school year with the name of your student's new teacher as well as other vital information. Prior to us doing so, we would ask you to complete registration for your student through Infinite Campus. You can register by going to this web address in your browser:

<https://tech.lcsd2.org/parents/online-registration/>

One critical piece of information included in this letter will be Osmond's dress code with an accompanying visual display of acceptable and unacceptable attire. Please read the policy in its entirety. Please also use the visual as a guide in purchasing school clothes for the upcoming school year. Please call the school if you have any questions.

GOFASA Adventure Club

Sign-ups for GOFASA Adventure Club will be placed in the cubby across from the office in May. Students that are interested should take a packet home and share with parents.

If students are committed to attending **all three trips**, the packet should be completed and returned to the office or Mr. Whitney. Unfortunately, due to the high demand and only 30 available spots, not all students will be able to participate. Students that do make it in will be notified before the end of the school year and will then receive further information.

Trip Dates

Salt River

Mon. July 10th – Tues. July 11th

Water Canyon

Thur. July 13th – Fri. July 14th

Bailey Lake

Mon. July 17th – Wed. July 19th

Just a
reminder...

If you haven't registered your student for the 2023 - 2024 school year, please visit lcsd2.org where you can complete that registration.

Thanks!

May is Food Allergy Awareness Month! Read below to explore 10 helpful and potentially life-saving facts and to learn about the signs of anaphylaxis, a severe allergic reaction.

SIGNS AND SYMPTOMS OF ANAPHYLAXIS

Anaphylaxis (an-a-fi-LAK-sis) is a serious allergic reaction that comes on quickly and has the potential to become life-threatening. The most common anaphylactic reactions are to foods, venom, medications, and latex.

Anaphylaxis signs and symptoms that may occur alone (*) or in any combination after exposure to an allergen include:

Consult with a board-certified allergist for an accurate diagnosis and management plan.

Although the majority of individuals experiencing anaphylaxis have skin symptoms, some of the most severe cases have no rash, hives, swelling

EPINEPHRINE is the first-line of treatment for anaphylaxis

Antihistamines, inhalers, & other treatments should only be used as secondary treatment

ALWAYS CARRY TWO (2) epinephrine auto-injectors at all times

When you, or someone you know, begin to experience symptoms, CALL 9-1-1 IMMEDIATELY!

10 FAACTs about Food Allergies

- Food allergies affect as many as 32 million Americans, including 6 million children. Studies report that 1 in 13 children and up to 1 in 10 adults in the United States have a food allergy. For children, this averages to two children per classroom.
- A food allergy is an immune system response to a food that the body mistakenly believes is harmful.
- Eight foods account for 90% of all food allergy reactions: Peanuts, Tree nuts, Milk, Egg, Wheat, Soy, Fish, & Shellfish. However, almost any food can cause a reaction.
- There is no cure for food allergies and strict avoidance is the only way to prevent an allergic reaction.
- Trace amounts of an allergen can trigger an allergic reaction in some individuals. Past reactions to a food allergy do not predict future reactions! Someone can still have a life-threatening reaction to a food they are allergic to, even if they have never had a serious reaction before.
- Symptoms can develop rapidly after exposure to an allergen, often within minutes and usually within 30 minutes. However, it can take up to 2 hours for symptoms to occur after exposure to a food allergen.
- Anaphylaxis is a serious allergic reaction that comes on quickly and has the potential to become life-threatening. Anaphylaxis requires immediate medical treatment, including an injection of epinephrine and a visit to the emergency room.
- It is important to be deliberate and not hesitate when you have to use epinephrine. The device is potentially life-saving. A call to 9-1-1 and a trip to the emergency room should always follow epinephrine administration.
- Individuals at risk should carry two epinephrine auto-injectable devices with them at all times AND an Allergy and Anaphylaxis Emergency Care Action Plan signed by a board-certified allergist.
- Food allergies continue to rise and are a safety and public health concern across the United States. You can get free resources and find out how to help keep those with food allergies safe at:
